

## Infection Prevention and Control - Sink Splash Zone Audit

Sinks and drains can disperse droplets generated during usage and contaminate items within 2-meters of a sink - the sink splash zone. This audit will assess the sink splash zone for stored items or medications.

Sink Splash Zone Audit

| Location: Completed by: Note: Use N/A if not applicable or not assessed |  |  |  |  |   |                     |    |     |          |
|---|--|--|--|--|---|---------------------|----|-----|----------|
|   |  |  |  |  | Item assessed                               | Practice identified |    |     | Comments |
|   |  |  |  |  |   | Yes                 | No | N/A | Comments |
|   |  |  |  |  | No items are stored on the sink or adjacent |                     |    |     |          |
| counters  |  |  |  |  |   |                     |    |     |          |
| Patient/resident care items are not stored                              |  |  |  |  |   |                     |    |     |          |
| within 2m of a sink   |  |  |  |  |   |                     |    |     |          |
| If patient/resident care items are stored                               |  |  |  |  |   |                     |    |     |          |
| within the splash zone, a splash guard is                               |  |  |  |  |   |                     |    |     |          |
| mounted beside the sink   |  |  |  |  |   |                     |    |     |          |
| Medications and IV fluids are not prepared                              |  |  |  |  |   |                     |    |     |          |
| within 2m of the sink   |  |  |  |  |   |                     |    |     |          |
| Specimens are not prepared, collected or                                |  |  |  |  |   |                     |    |     |          |
| stored within the splash zone   |  |  |  |  |   |                     |    |     |          |
